

How do I get vaccinated with Othena?

STEP 1

Register on Othena.com

Create an account by visiting Othena.com answering a short questionnaire, and providing your registration details.

- Current phase eligibility questions
- Provide your personal details and create login information (email, contact and password)

Othena confirms you are eligible to have the COVID-19 vaccination.

Othena registers you in the system

STEP 2

Wait in a "Digital" Queue

Once registered, your details are placed in a queue/line. We will update you when vaccination appointments are available.

- CDPH & CDC guidelines for distribution are being followed.

Vaccine supplies are very limited. Please be patient. As additional doses are received, appointments will be made available.

Once you are registered and in the digital queue we will notify you when it's your turn to schedule an appointment.

STEP 3

Get Your Appointment

When it's time to schedule your appointment, Othena will notify you via email and application notifications. You will select from available appointment times.

- Make sure to download the Othena app from your device's app store.

You will receive a second dose of vaccine either 21 days or 28 days after your first dose. Please do not schedule a vaccine appointment if you are not available for both doses.

If you need to reschedule or cancel the appointment, you can re-enter the queue.

STEP 4

Be Prepared

You can save time at your vaccination appointment by downloading the Othena app and completing the required forms.

- Fill out required vaccination forms and provide your consent to be vaccinated in the app.
- Check in with a Quick Response (QR) code you can download from the app.

Quicker vaccination appointments mean we can get more people vaccinated every day.

Keep track of your appointment date and time once scheduled.

STEP 5

Get Vaccinated & Schedule Follow-Up

Attend your vaccination appointment and get vaccinated. You will receive a notification with the date, time and location of your second dose appointment.

- Your second dose is scheduled at the appropriate time based on the type of vaccine you received.
- Second dose appointments are set 21 days after receiving the Pfizer vaccine, and 28 days after receiving the Moderna vaccine.

The second dose of vaccine is an important step to make sure you are fully protected.

Othena gets you set up for the follow-up appointment.

STEP 6

Stay Engaged & Educated

After getting your vaccine shot(s), you can use Othena to keep up with the latest vaccine news, engage with the application, and track symptoms.

- Othena will provide the most up-to-date and factual information as it relates to COVID-19 and the vaccines.

Track symptoms from the vaccination in the application.
